Good Afternoon Tom: Attached for your information and files, please find the February 5th lab report and Erica's field notes for Sand River. Flows were not taken due to unsafe ice conditions, I had Brett and Erica check the ice conditions again today and still not safe. In order to do flows, we would need to get something long enough to go across the River to stand on – do you have anything that might work or any thoughts? Should you have any questions, or need any additional information, please don't hesitate to contact me. Thanks,

Scott Seeley
